Jr., Joste N., McDonald G.A.;
"Cloning, expression and sequence analysis of the gene encoding the "Cloning, expression and sequence analysis of the gene encoding the 120 kp surface-exposed protein of Rickettsia rickettsii.";
Mal. Microbiol. 3:1579-1586(1989).
Mal. Microbiol. 3:1579-1586(1989).
-1. FUNCTION: THE 120 KDA SURFACE-EXPOSED PROTEIN IS A MAJOR STRUCTRAL PROTEIN WHICH MAY PLAY A ROLE AS A RICKETTSIAL STRUCTROR. AND/OR IMMUNOGEN DURING INRECTION.
-1. SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY LAYER WITH HEXAGONAL SYMMETRY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SAGLVTASTATIVASFAGSAMGAAIQQNRTT------NGAATTVDGAGF---

Microbiol. 3:359-369(1989).

-! FUNCTION: PROPERSE WHICH BREAKS DOWN MILK PROTEINS DURING THE GROWTH OF THE BACTERIA ON MILK.
-!- CATALYTIC ACTIVITY: ENDOPPETIDASE ACTIVITY WITH VERY BROAD SPECIFICITY, ALTHORGH SOME SUBSITE PREFERENCE HAVE BEEN NOTED, E.G. LARGE HYDROPHOBIC RESIDUES IN THE PLAND 4 POSITIONS, AND PRO IN THE P2 POSITION. BEST KNOWN FOR ITS ACTION ON CASEINS, ALTHOUGH IT HAS BEEN SHOWN TO HYDROLYSE HEMOGLOBIN AND OXIDIZED 01-APR-1990 (Rel. 14, Last sequence update) 15-UDL-1998 (Rel. 35, Last annotation update) PIL-TYPE PROTEINASE PRECUESOR (E. 3. 4.21.96) (LACTOCEPIN) (CELL WALL-ASSOCIATED SERINE PROTEINASE) (LP151). Plasmid pLP763. Bacteria; Firmicutes; Bacillus/Clostridium group; Streptococcaceae; INSULIN B-CHAIN.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN. CELL WALL.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY S8; ALSO KNOWN AS THE
SUBTILASE FAMILY. Lactococcus lactis (subsp. lactis) (Streptococcus lactis). PRT; 1902 AA. InterPro; IPR001209; -.

Immun. 60:159-165(1992).
-!- FUNCTION: THE 120 KDA SURFACE-EXPOSED PROTEIN IS A MAJOR
STRUCTURAL PROTEIN WHICH MAY PLAY A ROLE AS A RICKETTSIAL
VIRULENCE FACTOR AND/OR IMMUNOGEN DURING INFECTION.
-!- FUNCTION: THE 3Z KDA BETA PEPTIDE MAY SERVE AS A MEMBRANE ANCHOR.
-!- SUBCELLUTAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY A
S-LAYER WITH HEXAGONAL SYMMETRY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15-JUL-1998 (Rel. 36, Created)
15-JUL-1998 (Rel. 36, Last sequence update)
01-0CT-2000 (Rel. 40, Last annotation update)
0UTER MEMBRANE PROTEIN B PRECURSOR (168 KDA SURFACE-LAVER PROTEIN)
SURFACE PROTEIN ANTIGEN) (CELL SURFACE ANTIGEN) (SCA5) (ROMP B)
[CONTAINS: 120 KDA SURFACE-EXPOSED PROTEIN (SURFACE PROTEIN ANTIGEN)
(120 KDA OUTER MEMBRANE PROTEIN OMPB); 32 KDA BETA PEPTIDE].

Molecular characterization of the hemolysin determinant of Serratia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -i-FUNCTION: CELL-BOUND HEMOLYSIN, WHICH RELEASES HEME-IRON FROM ERYTHROCYTE BY INTERACTION WITH THE ERYTHROCYTE MEMBRANE. SHLA REQUIRES SHLB FUNCTION.
-i- SUBCELLULAR LOCATION: OUTER MEMBRANE.
-i- SIMILARITY: TO P.MIRABILIS HEMOLYSIN (HPMA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           INTERCENTIAL 170:3177-3188(1988).
J. BECLETIOL, 170:3177-3188(1988).
-!- FUNCTION: BACTERIAL HEMOLYSINS ARE EXOTOXINS THAT ATTACK BLOOD CELL MEMBRANES AND CAUSE CELL RUPTURE BY MECHANISMS NOT CLEARLY

GROWTH OF THE BACTERIA ON MILK.
-!- CATALYTY ENDOPEDFIOASE ACTIVITY WITH VERY BROAD SPECIFICITY, ALTHOUGH SOME SUBSITE PREPERENCE HAVE BEEN NOTED, E.G. LARGE HYDROPHOBIC RESIDUES IN THE P1 AND P4 POSITIONS, AND PPO IN THE P2 POSITION. BEST KNOWN FOR ITS ACTION ON CASEINS, ALTHOUGH IT HAS BEEN SHOWN TO HYDROLYSE HEMOGLOBIN AND OXIDIZED INSULIN B-CHAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PII-TYPE PROTEINASE.
